Beste collega's,

Ziehier de handleiding hoe de mensen met een Kodak Personal Picture serie hun printer kunnen ombouwen naar Lexmark patronen.

Druk deze handleiding af en steek hem in de bijbel.

The Kodak Personal Picture Maker series of printers are apparently no longer being made. This series of printers was manufactured by Lexmark for Kodak and the cartridges used in these printers are actually Lexmark cartridges that have slight variations designed to make the two brands incompatible with each other. **While the Kodak color cartridge (number 1951730) had been unavailable for the first half of 2004, we now have it back in stock! However, the information on this page may still prove useful or at least educational.**

Several inksite customers had been looking for a way to keep their Kodak printers running and it seems they'd found a workable solution. See here how to modify a Kodak PPM200 to accept a Lexmark brand cartridge.

Notice the purple and yellow plastic pieces at the back of the ink carriage.

Here you can see how the plastic pieces can easily be removed from the printer.

Finally here you can see how the printer will now accommodate a Lexmark 16G0065 cartridge. Please note that while Kodak only made one color cartridge available, Lexmark offers two versions: the "High Yield" 16G0065 (also known simply as the '65) and the "Standard Yield" 17G0060 (also

known simply as the '60). Either one can be substituted for a Kodak brand cartridge.

Color Lexmark Cartridges to replace Kodak 1951730		Black Lexmark Cartridges to replace Kodak 1369511		Photo Lexmark Cartridge to replace Kodak 1754852
